

English

Choice of two plants(what plants would you chose to build in the next few years ?)

nuclear electricity plants

→ dangerous waste => Long term

→ No gas émission

Coal electricity plants

→ coal energy

→ Very hig gas emission => short term pollution.

End wehere do you wan to put it? In France? In china?

I would choose the nuclear energy because we have all the capacitys to filter the pollution and block it. And i would put it in France so that we could benefit from that energy.
