Describe the pictures p219

In first photograph we can see a young girl riding a bicycle. She can carry her belongings in a basket at the front of her bicycle. She isn't wearing a helmet which is very dangerous. If it rains she is not protected but if the weather is sunny and warm as it is on the photograph it is pleasant to cycle in town. In the photograph there isn't a lot of traffic, so the pollution is weak. But in the city of London the exhausted fumes may be dangerous.

The second picture shows a business man trying to stop a yellow taxi or a bus in New York. He's wearing a suit and a tie and the taxi is cosier than the bicycle. Considering that the pollution from the exhaust fumes is surrounding the area.

In the small towns or in green areas the use of the bicycle is agreeable in summer or spring, but in the big cities cars, busses or taxis are more comfortable and safe.

The common point/similarities are that both people are trying to get around town in a way that they find more comfortable. Both are in a road. In both pictures there are a few cars. There are tall buildings in the pictures. There are plants in each picture. The weather looks good because it is sunny. The people in each picture are happy. The pollution is still present in the two pictures.

Do you think that electric cars will take over from petrol engines one day?

One day electric cars might take over petrol engines if their electricity is not produced by nuclear factories but by other green sources then they might take over. The cost of the need of the material to produce it will also depend on their efficiency. If the electric cars have more performant batteries allowing the driver to travel long distances then the electric cars might take over petrol engines.
